1. Introduction

This website if for Five Points Bakery, a local bakery and cafe that focuses on local ingredients. Their website will have a clear, simple design with an easy-to-navigate user experience. It will have two contact forms, including one for booking the event space. It will also include pdf menus and search engine optimization.

2. User Interface Design and Prototype

I've chosen a simple layout featuring large images to create a sense of beauty and simplicity as well as clarity. (see attached wireframes)

3. Navigation Structure

Every page will be accessible from every other page. A user who comes to the website to look at the event space details will see "Event Space" in the navigation bar and be immediately directed to information about event rentals as well as photos of the space.
